

Fibre Broadband Installation B2B (Quick Proposal)

Question after industry sector and Industry sub-sector selected dropdown template auto-load and quick or standard proposal is selected, or the User has used NLP to select the sector and sub-sector (example below is for a Standard Proposal selected).

(User can type or speak responses; AI recognises intent and fills the proposal slots dynamically)

The User has selected Telecoms (**Industry Sector**), Fibre Broadband Installation (**Sub-Sector**).

AI (friendly tone):

"I've set up your proposal with the standard sections for [Industry Sector]. I will ask you a series of questions to help you complete each section of your proposal. We'll move step-by-step from start to finish, but you can jump ahead or change anything at any time. Are you ready to start?"

(User: "I'm happy to start", "Let's move on", or "Yes, let's get started")

Step 1 – Client & Project Basics

AI:

Great. Before we begin, do you want a *Quick proposal* or a *Standard proposal*?

User:

Quick proposal please.

AI:

Okay. "Do you have a title for this proposal, or would you like me to make a few suggestions?"

User:

I have a title. The title is, "*1Gbps Business-grade Fibre Broadband Service Proposal*".

AI:

"First, who's the proposal for?"

(User: "*Sky Networks Ltd*")

AI:

"Got it – Sky Networks Ltd. And what service are we proposing?"

(User: "*Fibre Broadband Installation – 1Gbps business grade*")

AI:

"Perfect. Who should we list as the proposal preparer?"

(User: "*Freedom Fibre Ltd*")

AI:

"Date today is 30 October 2025. Want me to keep that as the preparation date?"

(User: "Yes")

AI:

"How long should the proposal be valid for?"

(User: "*Until 30 November 2025*")

Section 2 – Executive Summary

Fibre Broadband Installation B2B (Quick Proposal)

AI:

*“Okay, let’s tell them what we’re delivering, in plain English. Here’s a starter draft:
‘We propose the installation of a 1Gbps business-grade fibre broadband service for Sky Networks Ltd, spanning two commercial sites in Central London. The service includes site surveys, equipment installation, testing, and go-live support.’
Would you like me to make it warmer, more persuasive, or keep it factual?”
(User: “More persuasive”)*

AI:

“Done. I’ve added a line about reliability and business impact.”

Section 3 – Scope of Work

AI:

“Here’s what I’ve have for the scope:

- Pre-installation survey
 - Fibre trenching and cabling
 - Installation of Budi box and internal fibre routing
 - Testing and commissioning
 - 3-month post-deployment support
- Anything to add or remove?”**

(User: “Can you add project documentation and user training?”)

AI:

“Okay. The preview is updated.”

Section 4 – Delivery Timeline

AI:

*“When do we expect to start?”
(User: “15 November 2025”)*

AI:

*“And completion date?”
(User: “30 November 2025”)*

Section 5 – Responsibilities

AI:

“Here’s the draft split of responsibilities:

- *Freedom Fibre Ltd:* Full installation, testing, documentation, communication, project reports and updates.

Fibre Broadband Installation B2B (Quick Proposal)

- Client: Site access, power provisioning, internal routing approvals, implementation handover approval.

Want me to adjust tone or detail here?”*

(User: “Can you make the client responsibilities sound collaborative?”)

AI:

“Updated – now reads as shared goals rather than obligations.”

Section 6 – Commercials

AI:

“Total cost?”

(User: “£6,750, excluding VAT”)

AI:

“Shall I include a breakdown line or just say ‘available on request’?”

(User: “Available on request would be fine.”)

Section 7 – Terms & Conditions

AI:

“Default T&Cs:

- 50% deposit upon contract signing
- Payment due within 30 days of invoice
- Standard fibre install SLA applies (see Appendix A)
- Proposal valid for 30 days

Shall I keep these or adapt them?”*

(User: “Keep them as they are”)

Section 8 – Conclusion

AI:

“Let’s conclude this with a closing line. Here’s one option:

‘We look forward to delivering a robust, high-speed fibre solution that empowers your business to operate at peak efficiency.’

Want me to make it more urgent or keep it neutral?”

(User: “Can you make it more urgent”)

AI:

“Okay. The preview is updated.”

Fibre Broadband Installation B2B (Quick Proposal)

Section 9 - Contact Information

AI:

“Should the recipient of your proposal require further information, would you like to add your contact details, by giving your name, phone number and email address?”:

(User: “Yes, my contact details are”. [User provides contact details])

AI:

“Great. Just to confirm, here are your contact details:

For further details or clarifications, please contact:

Name: [Your Name]

Phone: [Your Company Number]

Email: [Your Email]”

The preview is updated.”

Save & Output (selected by User).

AI:

“All set. I’ve saved both your Q&A chat history and the proposal draft. You can export as Word, PDF, or HTML from the top right menu. Want me to send you a quick summary of what we’ve built?”

(User: “No need for a summary, I’ll read the preview as it is. Thank you.”)

Confirmation Before Critical Actions

Before exporting or saving, AI validates consistency.

Example

AI:

“Your proposal has a Delivery Timeline but no Financials yet. Would you like to export anyway or go back and complete Financials first?”

(User chooses one → proposal finalised or held.)

(User: “I am aware some sections are empty, but I wish to export the proposal as it is.”)

Further examples of AI questions, depending on the User response:

AI (friendly tone):

“I’ve set up your proposal with the standard sections for [Industry Sector]. I will ask you a series of questions to help you complete each section of your proposal. We’ll move step-by-step from start to finish, but you can jump ahead or change anything at any time. Are you ready to start?”

(User: “No, I would like to make changes to the proposal format”)

Fibre Broadband Installation B2B (Quick Proposal)

AI:

“Which proposal sections would you like to add, remove, or customise before we start filling them in?”

(User: “I would like to change [User describes which item requires a change]”)

After completing a section

AI:

“That’s the [Executive Summary] done. Do you want to add another section, tweak what we just wrote, or move on?”

(User: “No, I’m happy to move on”)

If user says, “add another section”

AI:

“Got it. What’s the title for this new section?”

(User responds)

“And what would you like it to cover?”

(User responds)

“Okay — I’ll draft that for you now.”

If user says, “tweak this one”

AI:

“Sure — tell me what you’d like to adjust in the [Executive Summary].”

(User responds)

“Updating that now... done. Would you like to review it again or move forward?”

If user says, “move on”

AI:

“Alright, next up is [Scope of Work]. Here’s the first question...”

Extra free-form option (works anytime)

If the user at any point says something like “Can I add a section about sustainability?”, the AI should:

“Absolutely — I’ll slot that in right after [Scope of Work], unless you prefer a different position?”

How blanks appear in the proposal

Instead of leaving pure white space, use a soft placeholder so the document doesn’t look broken:

[Section intentionally left blank] or [Details to be confirmed]

This makes the exported document look deliberate and professional, even if data is missing.

User Guidance

Fibre Broadband Installation B2B (Quick Proposal)

Without guidance, some users might freeze up or give a vague answer.

For example,

AI:

“What is your value proposition?”

(User: “I am not sure I understand your question.”)

A concise but helpful **AI** tip could be:

AI:

Explain *why* your offer is valuable to the client, highlight the main benefit, how it solves their problem, and what makes it different from competitors.

Or, slightly warmer in tone for a “business colleague” feel:

Think of this as your quick pitch, why should the client choose you? Focus on the key benefit, how you solve their problem, and what sets you apart.

This way, even non-marketing-savvy users will have a clear mental framework for their answer.

Here is a **Value Proposition Section Template that can be used for different sectors**

“We [deliver/provide/offer] [primary product or service] that [main benefit or problem solved], ensuring [key measurable outcome or reassurance], backed by [unique differentiator].”

Example for Telecoms Broadband (B2B) Using the Same Section Template:

- **Telecoms:**

“We provide ultra-fast 1Gbps fibre broadband that keeps your business connected at all times, ensuring 99.99% uptime, backed by 24/7 UK-based technical support.”

Incomplete Answers

AI should politely clarify if the user doesn’t provide enough detail.

Example

AI:

“What service are we proposing?”

User: “Broadband.”

AI:

“Thanks. Just to be clear, do you want me to write this as standard residential broadband, or as a business-grade service? (e.g., ‘1Gbps fibre broadband for commercial sites’)”

Contradictory Information

Fibre Broadband Installation B2B (Quick Proposal)

If users provide conflicting data, AI should spot it and prompt clarification.

Example

AI:

“You said earlier the project starts on 15 September 2025, but just now you mentioned 16 September 2025. Which date should I use in your proposal?”

(User selects one; AI updates the proposal consistently.)

Irrelevant or Off-topic Inputs

If a user’s response doesn’t fit the current section, AI nudges them back on track.

Example

AI:

“What’s the total cost for this project?”

User: “We hope the client likes our fast service.”

AI:

“That’s a good point for the Executive Summary. For this section, could you confirm the project cost (e.g., ‘£6,750 excluding VAT’)?”

Speech-to-Text Ambiguity

When mishearing is possible, AI offers disambiguation.

Example

AI:

“When should the project start?”

User (via speech): “September fifteenth.” (speech-to-text renders “September fifty.”)

AI:

“Did you mean September 15th, or something else? Can you confirm?.”

Reusability & Autofill

AI asks before reusing stored information, so users don’t feel locked in.

Example

AI:

“Would you like me to autofill your company and contact details from your last proposal, or do you want to use different details this time?”

(User: “Yes, autofill.” OR “No, let me enter new details.”)

→ Proposal updates accordingly.

Optional Sections / Skipping

Fibre Broadband Installation B2B (Quick Proposal)

If users don't want to fill a section, AI makes that explicit, with awareness for export.

Example

AI:

“Do you want to add Terms & Conditions now or skip this section for later?”

(User: “Skip for now.”)

AI:

“Okay, I'll leave this section blank. You'll be reminded before exporting that this section is incomplete.”
